Priority number(s): JP19910045511 19910219

INPADOC patent family: None

Abstract:

PURPOSE: To remove fouling such as organic matter by chemical force by oxidizing a foreign matter on the surface of an article to be washed.

CONSTITUTION: In a washer, a plurality of revolving rollers 3, 3' carrying an article to be washed 2 mounted into a washing chamber 1 are arranged and a plurality of shower nozzles 11, 11', to which gas feed pipes 14, 14' feeding oxygen group gas containing oxygen atom radicals and detergent feed pipes 12, 12' feeding a detergent are installed, are disposed to the upper and lower sections of the article to be washed 2. The detergent is evaporated by a detergent vapor generator in the washer.
